EDUCATION

Boston College

B.S. in Computer Science, Minors in Data Science and Finance — 3.68/4.00

Aug. 2023 - May 2027
Relevant Coursework: Object-Oriented Programming, Data Structures & Algorithms, Computer Systems, Discrete Math, Web Application Development, Linear Algebra, Software Engineering

Chestnut Hill, MA

TECHNICAL SKILLS

Languages: Java, Python, C, C++, SQL, PostgreSQL, JavaScript, HTML/CSS, Assembly

Frameworks & Libraries: React, Node.js, Material-UI, FastAPI, Next.js, Express.js, Vite. PyTorch, NumPy, Matplotlib, Plotly, pandas, scikit-learn, Puppeteer, Selenium, Beautiful Soup

Developer Tools: Git, GitHub, GitLab, Jupyter, VS Code, Cursor, Claude, ChatGPT

PROFESSIONAL EXPERIENCE

Ophelia Dating

Software Engineer Intern

May 2025 - Aug. 2025

Boston, MA

- Extracted 5,000+ real-time event listings from OpenTable and Posh.vip with 3 custom Puppeteer scrapers
- Implemented 12+ backend API endpoints to support data ingestion, session management, and reservations
- Reduced scraper failure rates by 40% by integrating structured logging and timeout handling, ensuring consistency

UC Berkeley Department of Nuclear Engineering

Undergraduate Research Assistant

Jun. 2024 – Aug. 2024

Berkeley, CA

- Authored a choropleth visualization tool in Python using Plotly, enabling real-time mapping of atmospheric data
- Engineered and optimized data analysis algorithms with Python libraries such as scikit-learn and NumPy, achieving 95% accuracy in machine learning modeling of 3,000+ local radiation data points
- Authored structured metadata records, boosting accessibility and accelerating external research workflows
- Streamlined data visualization processes by automating data ingestion and mapping workflows, ensuring updates for research with 50% increased frequency

EXTRACURRICULAR EXPERIENCE

Boston College Computer Science Society

Technical Programming Team

Jan. 2024 – Present

Chestnut Hill, MA

- Championed scrum and Agile methodologies within 5-member cross-functional team for club website (bccss.co)
- Spearheaded Hack the Heights hackathon, including React website development and logistics for 100+ attendees

PROJECTS

Libro | *React, Vite, Node.js, Supabase, Git*

May 2025

- Developed and deployed Libro, an AI agent-driven journaling automation tool for user experience and productivity
- Integrated Retell AI SDK to enable real-time voice recognition, call transcription, and summarization
- Designed Node.js backend with 10+ API routes between Supabase and Retell to handle user auth & scheduling

Snippets | *React Native, Git, Supabase*

Dec. 2024 - Jan. 2025

- Deployed database schemas in PostgreSQL using Supabase to structure data storage & retrieval
- Integrated and optimized CRUD operations for the profile and friends page, allowing users to create, update, and manage settings & connections and reduced database redundancies by 20%
- Crafted 10+ API endpoints to support real-time updates for friend additions and profile changes, enhancing user experience and overall application responsiveness

EmpathiRead | *TypeScript, PyTorch, Node.js, Git*

Jun. 2024

- Leveraged Hugging Face and OpenAI LLM models to simplify web content and increase web accessibility
- Produced NLP-driven CSS injections to customize page layouts and provide inline definitions, delivering an inclusive reading experience for all age levels with 30% increased efficiency
